

## How to use three-part cards:

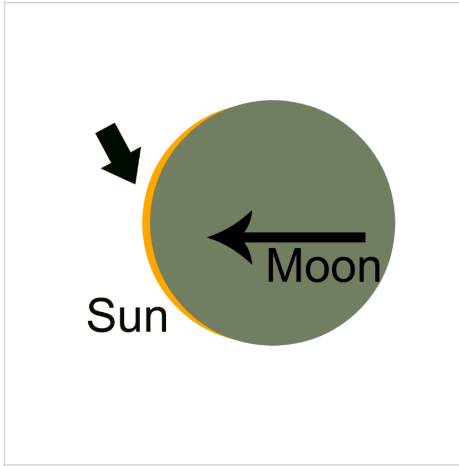

These cards can be used to play matching or sequencing games, for reading practice or giving a three period lesson on the eclipse nomenclature. They can also be stapled into little booklets. Alternatively have kids make their own books by copying the text and drawing their own pictures!

I made these for my own kids to learn about the 2017 Solar Eclipse. I hope your family can use them too. Because these images are from Wikimedia Commons, they may not be sold. Thank you for your consideration.

To assemble, I would print single-sided in full color on cardstock. Next laminate with 5 mil and cut out. Each term has one full card with label and a second corresponding picture with label to be cut apart individually (thus three-part cards).
